

dieffebi

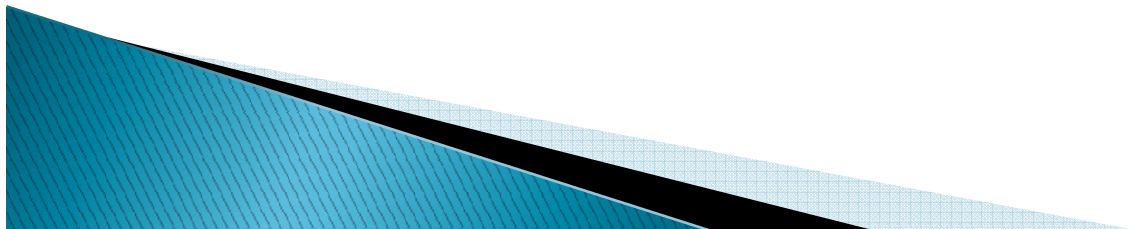

dieffebi

Since 1976, Tradition with Innovation...

- 1976** Established in 1976. Founded by Alberto De Zan and Claudio Pizzinato, specializing in communal and school metal furniture.
- 1988** Dieffebi starts supplying Agfa Gevaert Copying Machines Division, by making original copying machine stands. This co-operation enlarges by covering also Selex (Canon).
- 1990** Production of its own copying machine metal stands.
- 1991** Production of its own desking systems – model Meeting Point.
- 1994** Begins the specialized production of mobile filing (pedestals).
- 2007** Dieffebi reaches the highest performance in pedestal production to 130.000 units and turnover of 15 million Euros in sales.
- 2008** A new 10,000 m². logistics centre is opened, a second facility, which guarantees that all products included in the catalogue are delivered quickly and efficiently anywhere in Europe and the world.
- 2009** 700 m² of solar panels allow Dieffebi's production site in San Vendemiano to produce 120.000 Kwh of electricity by increasing its energy autonomy and lowering carbon gas emissions responsible for the greenhouse effect.
- 2010** Dieffebi obtains the UNI EN ISO 14001:2004 environmental certification that proves the company's concrete commitment to developing, implementing, maintaining and improving its environmental policy.

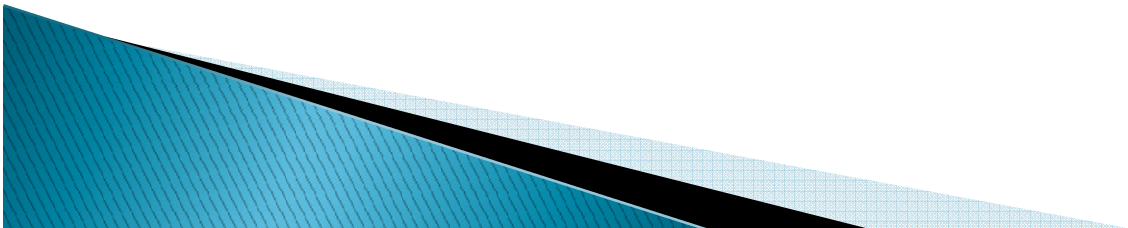

dieffebi

Head Office and production facility of 9.500 m² in
San Vendemiano (TV) Italy

Combined with logistic center of 10.000 m², –
including assembly, packaging and warehouse –
located in Cimavilla di Codogné (TV) Italy

- Dieffebi obtained UNI EN ISO 9001:2000 quality certification in 1997, renewed in 2009 with the **UNI ES ISO 9001:2008**.
- All Dieffebi products are tested by the German TÜV inspection agency and the **CATAS** labs in Udine, Italy. These tests guarantee the company's commitment to product development and quality. All **GS**-marked products have obtained **DIN 4554 12.1986** certification. Obtaining the GS mark was an important achievement confirming the company's continuous efforts to improve the final quality and safety of products.
- In December 2010 Dieffebi has obtained the **UNI EN ISO 14001:2004** environmental certification to prove the company's concrete commitment to respecting the laws governing the handling of waste products, avoiding the careless use of materials or energy, and also alerting suppliers to a more ecological and sustainable way of managing their activities.
- Attainment of ISO 14001 is an important signal of coherence towards a precise choice that – for many years now – has led the company to work according to the principles of sustainable development and the use of avant-garde technologies with low environmental impact.

Manufacturing – Dieffebi manages its manufacturing planning by adopting lean production methods and processes:

1) By defining the product quality objectives shown by productivity indicators and those related to the quality of the products.

2) By the identification and the determination of the whole production cycle, the constant availability of information that describes the product features through drawings, plans, layouts and programs that do contain the parameters to be respected during the product manufacturing and the conductions of the process.

3) The availability of technical information to define working procedures and use of all machinery and plants, and its correct maintenance.

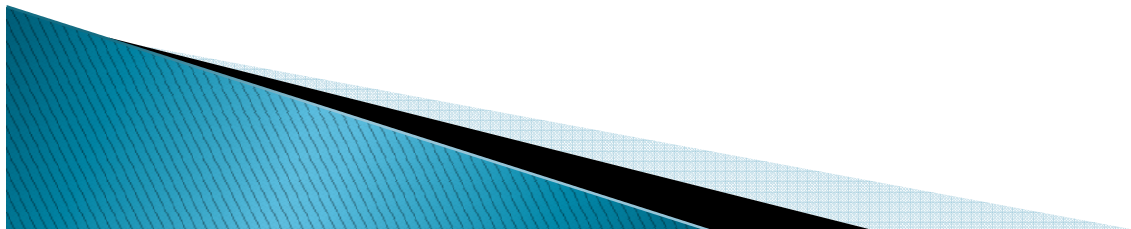

4) By monitoring and measuring systems

5) The activities related to quality control to release the products and their registration supports.

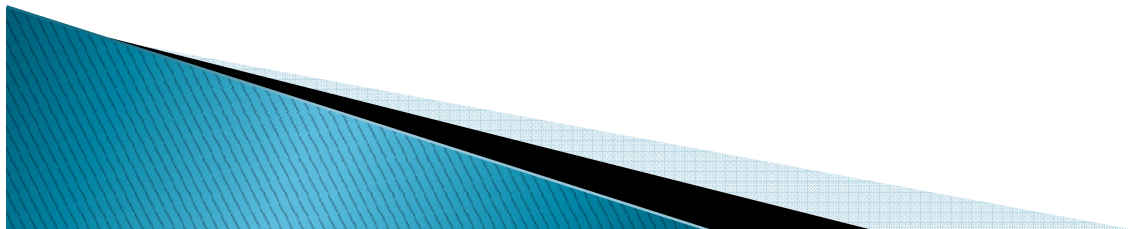

Why Dieffebi

- ▶ 1. more than 35 years of experience in metal furniture
- ▶ 2. strong commitment with design
- ▶ 3. open to any request of customization
- ▶ 4. large range of metal solutions in the catalogue
- ▶ 5. extremely competitive in some products (pedestals)

Why metal furniture

1. Is durable. It can withstand an unlimited number of relocations
2. Is possible to get some design solutions not available with wood
3. Is fire resistant
4. Unlimited colour possibilities
5. Is recyclable
6. Is sturdier than wood (the loading capacity per shelf shall be higher)
7. Is modern and versatile.
8. Offers very much original solutions if combined with wood or glass
9. Does not contains glue and formaldehyde
10. Is more resistant to humidity and water
